AllTurf

Our story so far...

The seed for All Turf was first sown in 2003, when a single grade of turf was grown on a small 6-acre field on our family farm.

We soon recognised we were just a small tadpole in a very big pond of much larger fish. We were never going to survive if we continued along this path. When given the chance to become North West distributors for a large and innovative turf company, we relished the opportunity and we are grateful to have received superb training and consistently high premium products to help us along our way.

In the early days, we did things very differently. From owning our own 6-wheeler HGV which came with its challenges – breakdowns were always painful! Double handling the turf and running around with empty return loads was not a good environmentally friendly option, nor was it a good sustainable option for growth in the longer term.

This method of delivery sometimes impacted on our customers if their delivery was late, we understood the frustrations and costs involved and this spurred us on to look for new and improved delivery options. However,

all these lessons served a purpose – helping to shape the streamlined, fast and cost-efficient methods we use today.

We don't rest on our laurels if something isn't working, we change it.

Our core values have always been strong, as we continue to grow, we are constantly looking for ways to improve. We search for new products and strive to find solutions for challenging areas. We continually look for new ways where we can add value to our customers, we visit sites and we give advice.

Put simply our aim is to offer all our customers a professional, knowledgeable and enjoyable experience from start to finish.

Our customers have always been at the heart of everything we do, and we genuinely love the industry we work in. This passion shines through in every project we undertake, helping us to deliver outstanding results for a wide range of clients.

LT7 Festival

There is a reason why our customers love Festival. It's used by designers for award-winning gardens, landscapers who take pride in laying a beautiful lawn for their customers, and by house builders for show homes.

This turf has an outstanding appearance, a rich green colour and is strong and easy to lay. Its hardwearing properties and dense appearance will make an instant impact and will enhance any landscaped garden.

Importantly, this turf is easy to maintain and, with the right aftercare, will continue to flourish many years to come.

Festival can be used in many landscaping situations where a good value quality grass is required.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: 25% Venice/Melbourne Perennial Ryegrass, 20% Yvette Smooth Stalked Meadow Grass, 35% Corsaire Slender Creeping Red Fescue, 20% Nikki Chewings Fescue

LT4 Smooth Stalk Ornamental

Aiming for an ornamental lawn? This may be the one.

LT4 has a fine appearance from the high fescue content and quick regrowth from the rhizomes of smooth stalk which will certainly help when maintaining a fine grass.

This is the time to consider if the ground is suitable for a fine lawn. The soil must be free draining and sandy. To keep this lawn in tip top condition it will require a good knowledge of lawn maintenance and require regular treatments. If these requirements sound unsuitable would LT7 Festival be a better choice?

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: 30% Sombrero Smooth Stalked Meadow Grass, 35% Valdora Slender Creeping Red Fescue, 20% Musica Chewings Fescue, 15% Rosinante Strong Creeping Red Fescue

LT8 Festival Plus

Festival plus is an exciting new product.

This grade is a show-stopper and can be used as a premium alternative to LT7 Festival. It is extremely hardwearing and quick to repair and with the right maintenance it will tolerate being mown a little shorter, giving a uniformed finish to domestic lawns and parks.

Unlike traditional hardwearing grasses it has a finer appearance. With a rich emerald green colour and dense sward, it's an excellent choice if high wear is a challenge, such as walkways and high foot traffic areas in gardens and landscapes situations.

During trials this turf has proven to be very drought tolerant and through the very warm summer we experienced in 2018 from start to finish it looked and performed immaculately retaining its green colour into the winter months.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: Creeping Ryegrass, Smooth Stalked Meadow Grass, Fescue

LT6 Sports Turf

LT6 has a high rye content which makes it a good choice in landscaping situations such as high wear areas in gardens and children's play areas.

LT6 has also proven to work in some shade situations. We use LT6 in conjunction with our molasses-based organic fertiliser, which aids with retention of moisture and nutrients.

This combination has successfully helped many landscapers when trying to combat and alleviate shade challenges. When managing shade, it is also key to keep the grass longer, keep well-watered and spiking the area to increase air movement can also help.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: 30% Columbine Perennial Ryegrass, 30% Melbourne Perennial Ryegrass, 25% Julius Smooth Stalked Meadow Grass, 15% Carousel Slender Creeping Red Fescue

LT2 Low Maintenance Fine Turf

This low maintenance turf has found a niche in the market

There are numerous applications for LT2: exposed drought-prone areas, difficult banks, highway verges, salty or coastal areas and green roofs.

Left to grow long, LT2 Low Maintenance Fine Turf produces a very attractive seed head, creating a perfect wispy grass which complements a wildflower meadow beautifully.

Benefits of this slow-growing, versatile turf include a reduced cutting frequency by a least half, with a reduction in the number of clippings to be removed. This turf performs well in low fertility areas as it requires very little nutrient input, a further bonus, when considering the ongoing costs of managing a living a product.

LT2 is very draught and salt tolerant. Low fertiliser inputs are required due to excellent disease resistance to red thread, fusarium and dollar spot. It can be treated extensively with only one or two cuts per year or intensively as a low input fine grass with a greatly reduced mowing regime.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: 30% Barkoel Crested Hairgrass, 25% Hardtop Fescue, 25% Barpearl Slender Creeping Red Fescue, 20% Bargreen Chewing Fescue

WOW Grass

Going for gold, choose WOW grass for your show garden.

WOW Grass is the turf we recommend for any turf aspect of a show garden – this includes the surrounds as it will frame your garden beautifully.

There are endless ways WOW Grass can be used. This product is a designer's dream.

Not only can WOW Grass be harvested in longer rolls to create a seamless look, but also the felt matting in which it is grown retains water, giving you more time to concentrate on other important areas of your garden.

WOW Grass is used throughout RHS flower shows and is the RHS turf product of choice.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Wildflower & Sedum

Wildflower Turf

This 100% wildflower mat has been designed to create a beautiful natural wildflower meadow over a prolonged flowering period.

With a combination of wildflowers and perennials this mix has been planted at the correct density for optimum establishment to achieve a prolonged flowering period, ideal for biodiversity and visual impact. This also acts as an important nectar source for bees, butterflies and other insects.

Flowering height is 40–80cm. There are 20 plus carefully selected wildflower species sown in our Wildflower Turf, all have been chosen so that different plants flower at different times providing a dynamic and ever-changing display.

The soil type that the meadow is established in will determine the type of flowers which grow best in the environment and the mixture will also adapt according to rainfall and temperature during different seasons.

Flora Native Wildflower Seed

Designed to embrace environmental landscape architect specifications.

Introducing a diverse range of native UK provenance wildflower mixtures to create, restore and enhance distinct habitats. All wild flora is native or of naturalised origin ensuring quality, reliability and performance.

Available in mixtures of 100% wildflower or wildflowers with grasses. Features flowering species found in the RHS “perfect for pollinators” list.

A range of specialist grasses complete the collection, and as with our Flora Native Wildflowers product, bespoke habitat mixtures may be periodically necessary – these are also available on request.

Wildflower Turf Seed

The same carefully designed seed mix used in our Wildflower Turf can also be supplied as a seed.

Success establishing wildflowers from seed can be tricky and time-consuming, you are unlikely to achieve the same stunning results as our instant Wildflower Turf – but overtime with patience and continued work it is possible to create a wildflower meadow from seed.

Wildflower Turf Seed can also be added to your existing wildflower meadow.

LT2 Low maintenance grass seeds can also be supplied as a complimentary grass for the wildflowers.

SedumPlus

A beautiful sedum matting sustainably grown in the UK, with 16 stunning varieties.

This exceptional blend of sedum plants provides interest and colour throughout the extended flowering period. The colours range from greens to vibrant reds, oranges, purples and browns, with a unique mix of different plants offering many leaf types and flowers to not only produce a blend of beautiful textures but also provide enhanced biodiversity.

This low maintenance, drought tolerant mat initially grown for green roofs is also versatile enough to look stunning on any area that requires low growing plant and minimal maintenance.

SedumPlus is grown in a strong felt mat made from recycled British textiles, it is lightweight and easy to install and available in roll sizes to suit site requirement.

Euroflor Urban Meadows

Beautiful, colourful displays of vibrant flowering meadows, providing cover and food for birds, insects and many species of mammals. Giving back to nature what has previously been taken away.

With over 30 stunning mixtures all germination tested, you can choose your ideal Euroflor mix for your landscape space.

Consisting of annuals, bi-annual and perennials and containing both garden flowers and wild flower species in varying proportions, the originality resides in their effect for colour balance, species diversity and natural aspect.

Euroflor brings economic benefits through minimising operating costs, such as reduced water consumption, plus environmental benefits - by conserving biodiversity and introducing more ecological practices. With equal importance, it brings cultural benefits through added value to landscapes and natural places, and can also play an educational role in environmental awareness.

For more information on all mixtures, technical guides, site selection and sowing for optimal success and troubleshooting visit our website.

Vegetation Layers

Wildflower Mat for Green Roofs

Our 100% Wildflower Mat is a mix of native wildflower and flowering perennials growing in a moisture retentive biodegradable felt mat to provide the appearance of a true wildflower meadow on a roof.

The mixture is ideal to complement the local habitat or to replace the habitat lost by the footprint of the building.

The mixture consists of 20 species of drought tolerant native wildflowers including cowslip, lady's bedstraw, meadow buttercup, red campion, self heal, yarrow and yellow rattle mixed with flowering perennials.

Flowering is over a prolonged period (March until October) creating visual interest and offering an excellent habitat for insects, butterflies and birds. The plants need a full cut in late autumn, removing all the cuttings.

SedumPlus for Green Roofs

Just one of three choices for lightweight extensive green roofs, helping to aid climate change, reduce urban flooding and improve air quality.

A beautiful sedum mat sustainably grown in the UK with 16 stunning varieties, all of which offer an attractive range of colours from greens to vibrant reds, oranges, purples and browns, to provide colour and interest at the same time as enhancing biodiversity.

Grown in a recycled mat and made from recycled British textiles, SedumPlus mats are supplied as a pre-grown instant vegetation layer, lightweight and easy to install and available in roll sizes to suit the site requirements.

Low maintenance and drought tolerance mean this matting requires a very shallow layer of substrate on which to flourish in any rooftop position.

Grass Mat for Green Roofs

Low Maintenance Grass Mat is ideal for extensive green roofs requiring a grass finish and low maintenance. The mat comprises of an established mixture of slow growing and drought tolerant grasses with low maintenance requirements, growing in a felt mat.

If mown the result is an attractive fine turf and there are fewer clippings to remove. Being drought tolerant, disease resistant and preferring low fertility, low maintenance grass mat requires minimal water, fungicide and fertiliser inputs.

If left unmown, the turf will flower in late May to early June producing decorative seed heads. It will reach a height of about 200mm by autumn when it should be cut and the clippings removed.

Our Complete Solution

Vegetation Layer

Supplied ready-to-roll-out as an instant vegetation layer, with the plants established and growing in a strong felt made from recycled textiles. The Wildflower Mat and SedumPlus Mat are lightweight, easy to install and low maintenance, available in two roll sizes to suit requirements and suitable for use with lightweight green roof substrates.

Green Roof Substrate

Green Roof Substrate is a blend of lightweight manufactured topsoil and lightweight aggregate.

The topsoil is manufactured from reclaimed sand and PAS 100 green waste compost and is certified to BS3882:2015 standards. The specially matured and graded recycled green waste compost provides optimal stability and minimal leaching for organic matter and nutrients. The topsoil is blended with carefully selected and graded lightweight expanded clay aggregate, sourced from the UK.

Green Roof Substrate provides good aeration and water holding properties and controlled fertility levels. It is simple to work with, lightweight, and offers guaranteed consistency throughout the green roof installation.

Available in 1m³ tote bags, 20-litre heat-sealed sacks, or in bulk, Green Roof Substrate provides high quality green roof growing medium with green provenance; it's also peat free and derived from 100% UK-sourced materials.

Drainage Layer

Our drainage layer product, Roofdrain, is ideal for extensive green roofs as it provides a lightweight drainage layer with a water reservoir to sustain plant growth.

Roofdrain attenuates rainfall making it an important element of the SuDS system. Roofdrain consists of a perforated cusped recycled HDPE (high density polyethylene) core with selected geotextiles thermally bonded on each side. The core acts as a water reservoir holding 4.5–5.5 litres per square metre for plants to access in dry periods. The core is perforated to allow excess rainwater to flow into the underside and away to drainage outlets.

The upper geotextile also has a 'zero' breakthrough head to prevent over-saturation of the substrate. The lower geotextile has two key functions; it offers additional protection to the waterproof membrane and acts as an extra moisture retentive layer, holding an additional 1.0 litres per square metre. This further enhances the water holding capacity of the system and slows the rate of run-off.

The Roofdrain is manufactured in the UK from up to 95% recycled material making it a sound environmental choice.

Edging Detail

Green Roof Edge can be used to retain or separate the green roof materials. Manufactured in the UK from high percentage recycled content aluminium, supplied pre-punched and profiled in 2.4m lengths in a choice of heights for quick installation. The edging profiles can be colour-coated in RAL colours.

Delivery

Delivery FAQs

How soon can you deliver my turf?

Our general rule of thumb is 48 hours from order to delivery.

Need the full day to lay?

We can request a pre-10am delivery slot for you so you can make the most of your day.

Need a forklift offload?

We have access to a variety of different hauliers that carry a forklift on board. These are subject to availability so the more notice you can give us, the better.

Not going to be on site for delivery?

We can talk to our drivers and ask them to leave the turf wherever you need it, as long as this is on private property.

Want to check your ETA?

Just give us a call and we can track your order for you and let you know it's on its way.

Some things you need to know

Our turf is delivered on wooden pallets and can weigh up to a tonne. You can keep the pallets or you can drop them back off with us and we will happily dispose of them for you – whatever is easiest for you.

If you are using our pallet courier service then the delivery will be manually offloaded using a pallet truck and this has to be onto a flat and level concrete surface. As the pallets are heavy they cannot be delivered onto grass, gravel or soil – this type of delivery needs a fork lift offload.

We will ask you about any access issues getting to your delivery location when you place your order. It is really important that you let us know about any potential problems so that we can do our best to plan ahead and prevent any hold ups on the day for you.

We take all the stress and guess work out of the delivery by making sure we use the right haulier for your job. We only work with reliable and trustworthy delivery companies that we know work as hard as we do to get your order delivered safely and on time.

We welcome any feedback you have on our delivery service so that we can continue to improve in any way that we can, so please get in touch and let us know how we did.

All Turf's values

Performance

Our aim is to do what we do well and be the best at what we do.

Passion

We are passionate about the things we do, and how we do them.

Quality

We never compromise on quality.

Accountability

We don't just do things right, we do the right thing.

Grow & Learn

We look for new ways to grow our products, our people and our business.

Team

Everyone is important, everyone matters and everyone adds value. We're all in this together.
