LT1 **Tournament Greens**

It's tried, and it's tested. This formula has been unrolled onto prestigious greens up and down the country.

Tournament Greens is grown on free-draining, sandy loam soil. A dense bent/fescue sward with very high purity and low thatch content.

It can also be supplied washed. The washing process will avoid contamination of high specification rootzones and there will be no layering to impede the root development or water percolation.

If you need your turf to root quickly, this is the solution as the roots quickly search to seek water and nutrients. A further advantage will be a greater biomass of roots. Finally, establishment time is fast, potentially giving a playable surface between 3 to 5 weeks dependent on temperature. Contact us for essential guidelines on managing washed turf.

Its outstanding properties are hard wearing with quick repair and recovery. Mowing height at harvest is between 6–8mm.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixtures: 30% Bent, 30% Chewings Fescue, 40% Slender Creeping Red Fescue. The final composition is usually 60–70% Bent and 30–40% Fescue

LT5 **Rye Tees**

The combination of wear tolerant ryegrasses and dense smooth stalked meadow grass provides outstanding wear and recovery.

LT5 is suitable for heavy clay areas and will perform equally well on free-draining sandy soils. Successfully used on tees including par 3s and municipal courses where extreme wear and heavy footfall can be challenging.

LT5 is a dense hardwearing mixture with quick repair and recovery. For a premium alternative to LT5 try upgrading to LT8 Creeping Rye for sports.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: 30% Melbourne Perennial Ryegrass, 20% Yvette Smooth Stalked Meadow Grass, 25% Nikki Chewings Fescue, 25% Corsaire Slender Creeping Red Fescue

LT2 Low Maintenance Fine Turf

On the golf course LT2 provides an environmentally sustainable solution.

This low maintenance turf has a fine appearance, it requires reduced irrigation, fertiliser and fungicide inputs and has a greatly reduced mowing regime. With the added benefit of mowing short as low as 5mm or left unmown up to 600mm.

This adaptable turf is ideally suited to many areas on the golf course which include greens, surrounds and fairways. Bunker surrounds which are exposed to draught, sand and difficult banks where frequent mowing is a challenge, will also be good choices to place LT2 low maintenance.

Low fertiliser inputs are required due to excellent disease resistance to red thread, fusarium and dollar spot. It can be treated extensively with only one to two cuts per year or intensively as a low input fine grass with a greatly reduced mowing regime.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: 30% Barkoel Crested Hairgrass, 25% Hardtop Fescue, 25% Barpearl Slender Creeping Red Fescue, 20% Bargreen Chewing Fescue

LT6 Sports Turf

LT6 is designed to withstand the wear and tear inflicted on sports pitches.

Football pitches, rugby pitches, training grounds, racecourses, polo grounds and school pitches. A turf with ryegrass as the main constituent yet with a strong presence of smooth stalk meadow grass which is so valuable for wear and recovery.

LT6 sport turf can be supplied as a standard turf, washed turf or thick turf.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: 30% Columbine Perennial Ryegrass, 30% Melbourne Perennial Ryegrass, 25% Julius Smooth Stalked Meadow Grass, 15% Carousel Slender Creeping Red Fescue

LT4 Smooth Stalk Tees

A great choice when aesthetics and quick re-growth are equally important and when a rye-based turf is not suitable for the course.

LT4 is a popular choice with greenkeepers. It's a quality mixture of smooth stalked meadow grass and 70% fescues, combines appearance with hard wearing properties and fast recovery. The smooth stalk runs consistently through the turf and the quick regrowth from rhizomes make it an excellent alternative to 100% fescue on wear areas.

LT4 has been successfully used on tees and fairways on all types of golf courses across the nation.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: 30% Sombrero Smooth Stalked Meadow Grass, 35% Valdora Slender Creeping Red Fescue, 20% Musica Chewings Fescue, 15% Rosinante Strong Creeping Red Fescue

LT8 Creeping Rye for Sports

The response we are getting from this new product is complimentary to say the least.

Its deep emerald green appearance is so appealing and it's extremely hardwearing with rapid repair qualities. The fine appearance has been well received on the golf course where it has been used successfully on pathways, heavy wear areas and more recently it has been trialled on tees.

During trials this turf has proven to be very drought tolerant and, even through very warm weather, retains its dense quality and deep green colour

Creeping Rye for Sports is suitable for football goal mouths, run lines and any sporting area where traditionally wear has been a challenge. When combined with our hybrid range the results have been outstanding.

Can be supplied in small 1m² (610mm x 1640mm) or big rolls (0.73m or 1.05m x 28m).

Sown mixture: Creeping Ryegrass, Smooth Stalked Meadow Grass, Fescue

Re-vetting Turf

We have done the hard work for you; our re-vetting turf is supplied in ready-cut, easy to handle strips.

The re-vetting turf for bunker faces and walls is cut in strips 250mm x 1050mm each piece is 30–40mm thick with good thatch content.

80 pieces per pallet will provide approximately 3 face metres (see our website for full specification).

Re-vetting turf can be supplied either sprayed off or unsprayed whichever is your preference.

*Dense thatch turf is also available for bunker lining.

Thick Turf

Provides a playable surface within 2 to 3 days, making it ideal for situations where time is of the essence.

This can include goal mouths or any high wear area which has been damaged and requires a quick solution or maybe the weather has gone against a project and traditional turf will not establish in the required time frame.

Thick turf is harvested at 40mm thickness and is installed using specialist machinery.

Washed Turf

All grades of turf can be supplied as a mature turf washed, using a highly specialised machine to remove all soil particles leaving a turf held together entirely by its root system.

Washed turf is ideal for new greens surfaces constructed with a high specification sand profile, we have also used washed turf in many areas where time for establishment is of the essence.

Some key features include:

- Avoids contamination of high specification rootzones with fine turf soil particles
- Avoids creation of a layer which impedes root development and water percolation
- Roots faster as it seeks water and nutrients
- Produces a greater biomass of roots
- Faster establishment time 3 to 5 weeks dependent on temperature

Where there's wear, there's a way.

Our range of hybrid turf has been installed in 1000s of installations across Europe.

From years of experience developing this hybrid range, it is fully understood that not all wear challenges are the same. The full hybrid range is designed with specific wear challenges in mind. In some instances, a grade may be adapted to create the perfect solution for a specific issue, it may be a simple tweak such as changing the pile height, but it will make all the difference once in situ.

Coverlawn is constructed with an extremely strong knotted polyester underside into which polyethylene pile of grass is attached. The density of the underside starts at 1000 denier and the pile length starts from 12mm.

We have thought hard about introducing a product that is not entirely natural into our range, after much research and consideration of many ecological challenges we believe that this is a good half way house option and deserves a place sitting alongside our other extremely environmentally friendly products.

Hybrid turf reduces environmental damage over 100% synthetic turf products.

See our website for further information on how hybrid turf compares to other synthetic turf products.

CL1201 Winter Tees

This new knitted construction hybrid turf reinforces and protects natural grass from the root system up.

Winter Tees is specifically designed for golf tees, driving ranges and par 3,4 and 5 courses, the short piles (12mm) together with the hole size and strong underside mean that integration with natural grass is a rapid process.

Installation of our hybrid turf is quick and easy as it can be laid directly onto an existing mown turf surface or can be seeded. When seeding, the hybrid mat will also act as a germination blanket encouraging quick growth and faster integration in cooler conditions.

Do your members prefer to play on a grass tee box rather than an artificial playing surface? Would you like the ability to keep summer tees in play all year round?

There are many ways this hybrid turf can improve play on the golf course, see our website for further information, before & after photos and case studies.

CoverLawn®

CL2802 Pitchwear

Hybrid turf will protect the root system of natural grass and create greener spaces even in areas subject to high wear.

The installation of hybrid grass will provide excellent protection for all grass surfaces exposed to heavy wear, making them prone to becoming muddy or turning to bare soil.

Areas such as penalty spots, linesmen run lines, coaches and managers technical zones, warm up areas, along with areas off the pitch worn from players, visitors and even machinery are ideal for hybrid turf.

CL2802 is an extremely strong product which has been adapted, so the pile height is the same as the hole size (20mm) for sporting situations. This combination means that the growth is more than 50% natural.

Referee's assistants play a very important role in today's game. In a split second they must decide if a player is on or offside and running on natural grass or a solid green hybrid surface without worrying about a slippery surface is crucial to the game when making the right decision. Not to mention the aesthetics, a muddy brown worn area next to the beautiful lush green pitch is not desirable.

Hybrid turf is cost effective and easy to install. For more information visit our website for comprehensive case studies, before and after photos and further technical information.

CoverLawn®

NRT2202 Pathway Lite

The turf sporting industry is doing its best to move back to a natural grass path where possible. Hybrid turf enables this to happen.

Natural grass paths are the first preference of walkway however with the foot traffic and the expectation of year-round play this makes having a grass pathway quite challenging leaving the need to look at other options.

We believe grass pathways are an important route to pursue however we also accept that they need a bit of a helping hand, which is where our hybrid turf comes into play. Enabling all the natural pros of a grass pathway such as the drainage, aesthetics and environmental qualities but making sure the walkway can handle the traffic.

Integrating with the root system and sitting amongst the grass sward, the light pathway takes all the wear whilst protecting the crown of the plant and maintaining the look of the natural grass sward above.

CoverLawn®

NRT3002 Pathway Natural

Pathway Natural differs from Pathway Lite. The backing is slightly stronger, the pile on top is slightly shorter at 30mm, and it is made of a different material which creates more friction making it ideal for use on slopes.

The combination of green piles with the use of brown strands to replicate thatch means that the topping looks very natural so even when first installed it will blend in well with the environment. Once integrated, even in extreme cases of wear the product still looks very natural and provides excellent cover should some wear occur.

NRT3002 is perfect for hills, embankments, heavy traffic pathways and any area where natural grass may struggle. It will help the natural grass to cope with the heavy wear yet retain a strong root system.

This product can be used in temporary or permanent situations, for example it is a good choice for concerts held in sporting stadiums where heavy footfall and bad weather conditions may cause severe damage and be very costly to repair.

Pathway Natural also stabilises the ground making it suitable for disabled use outdoors, as the ground can be strengthened, providing a stable grassed area all year round.

CoverLawn®

Wildflower & Sedum

Wildflower Turf

This 100% wildflower mat has been designed to create a beautiful natural wildflower meadow over a prolonged flowering period.

With a combination of wildflowers and perennials this mix has been planted at the correct density for optimum establishment to achieve a prolonged flowering period, ideal for biodiversity and visual impact. This also acts as an important nectar source for bees, butterflies and other insects.

Flowering height is 40–80cm. There are 20 plus carefully selected wildflower species sown in our Wildflower Turf, all have been chosen so that different plants flower at different times providing a dynamic and ever-changing display.

The soil type that the meadow is established in will determine the type of flowers which grow best in the environment and the mixture will also adapt according to rainfall and temperature during different seasons.

Flora Native Wildflower Seed

Designed to embrace environmental landscape architect specifications.

Introducing a diverse range of native UK provenance wildflower mixtures to create, restore and enhance distinct habitats. All wild flora is native or of naturalised origin ensuring quality, reliability and performance.

Available in mixtures of 100% wildflower or wildflowers with grasses. Features flowering species found in the RHS “perfect for pollinators” list.

A range of specialist grasses complete the collection, and as with our Flora Native Wildflowers product, bespoke habitat mixtures may be periodically necessary – these are also available on request.

Wildflower Turf Seed

The same carefully designed seed mix used in our Wildflower Turf can also be supplied as a seed.

Success establishing wildflowers from seed can be tricky and time-consuming, you are unlikely to achieve the same stunning results as our instant Wildflower Turf – but overtime with patience and continued work it is possible to create a wildflower meadow from seed when seed is the only option financially.

Also add Wildflower Turf Seed to your existing meadow if required.

LT2 Low maintenance grass seeds can also be supplied as a complimentary grass for the wildflowers.

Euroflor Urban Meadows

Beautiful, colourful displays of vibrant flowering meadows, providing cover and food for birds, insects and many species of mammals. Giving back to nature what has previously been taken away.

With over 30 stunning mixtures all germination tested, you can choose your ideal Euroflor mix for your landscape space.

Consisting of annuals, bi-annual and perennials and containing both garden flowers and wild flower species in varying proportions, the originality resides in their effect for colour balance, species diversity and natural aspect.

Euroflor brings economic benefits through minimising operating costs, such as reduced water consumption, plus environmental benefits - by conserving biodiversity and introducing more ecological practices. With equal importance, it brings cultural benefits through added value to landscapes and natural places, and can also play an educational role in environmental awareness.

For more information on all mixtures, technical guides, site selection and sowing for optimal success and troubleshooting visit our website.

SedumPlus

A beautiful sedum matting sustainably grown in the UK, with 16 stunning varieties.

This exceptional blend of sedum plants provides interest and colour throughout the extended flowering period. The colours range from greens to vibrant reds, oranges, purples and browns, with a unique mix of different plants offering many leaf types and flowers to not only produce a blend of beautiful textures but also provide enhanced biodiversity.

This low maintenance, drought tolerant mat initially grown for green roofs is also versatile enough to look stunning on any area that requires low growing plant and minimal maintenance.

SedumPlus is grown in a strong felt mat made from recycled British textiles, it is lightweight and easy to install and available in roll sizes to suit site requirement.

Delivery

Delivery FAQs

How soon can you deliver my turf?

Our general rule of thumb is 48 hours from order to delivery.

Need the full day to lay?

We can request a pre-10am delivery slot for you so you can make the most of your day.

Need a forklift offload?

We have access to a variety of different hauliers that carry a forklift on board. These are subject to availability so the more notice you can give us, the better.

Not going to be on site for delivery?

We can talk to our drivers and ask them to leave the turf wherever you need it, as long as this is on private property.

Want to check your ETA?

Just give us a call and we can track your order for you and let you know it's on its way.

Some things you need to know

Our turf is delivered on wooden pallets and can weigh up to a tonne. You can keep the pallets or you can drop them back off with us and we will happily dispose of them for you – whatever is easiest for you.

If you are using our pallet courier service then the delivery will be manually offloaded using a pallet truck and this has to be onto a flat and level concrete surface. As the pallets are heavy they cannot be delivered onto grass, gravel or soil – this type of delivery needs a fork lift offload.

We will ask you about any access issues getting to your delivery location when you place your order. It is really important that you let us know about any potential problems so that we can do our best to plan ahead and prevent any hold ups on the day for you.

We take all the stress and guess work out of the delivery by making sure we use the right haulier for your job. We only work with reliable and trustworthy delivery companies that we know work as hard as we do to get your order delivered safely and on time.

We welcome any feedback you have on our delivery service so that we can continue to improve in any way that we can, so please get in touch and let us know how we did.

Our story so far...

The seed for All Turf was first sown in 2003, when a single grade of turf was grown on a small 6-acre field on our family farm.

We soon recognised we were just a small tadpole in a very big pond of much larger fish. We were never going to survive if we continued along this path. When given the chance to become North West distributors for a large and innovative turf company, we relished the opportunity and we are grateful to have received superb training and consistently high premium products to help us along our way.

In the early days, we did things very differently. From owning our own 6-wheeler HGV which came with its challenges – breakdowns were always painful! Double handling the turf and running around with empty return loads was not a good environmentally friendly option, nor was it a good sustainable option for growth in the longer term.

This method of delivery sometimes impacted on our customers if their delivery was late, we understood the frustrations and costs involved and this spurred us on to look for new and improved delivery options. However,

all these lessons served a purpose – helping to shape the streamlined, fast and cost-efficient methods we use today.

We don't rest on our laurels if something isn't working, we change it.

Our core values have always been strong, as we continue to grow, we are constantly looking for ways to improve. We search for new products and strive to find solutions for challenging areas. We continually look for new ways where we can add value to our customers, we visit sites and we give advice.

Put simply our aim is to offer all our customers a professional, knowledgeable and enjoyable experience from start to finish.

Our customers have always been at the heart of everything we do, and we genuinely love the industry we work in. This passion shines through in every project we undertake, helping us to deliver outstanding results for a wide range of clients.

Our values

Performance

Our aim is to do what we do well and be the best at what we do.

Passion

We are passionate about the things we do, and how we do them.

Quality

We never compromise on quality.

Accountability

We don't just do things right, we do the right thing.

Grow & Learn

We look for new ways to grow our products, our people and our business.

Team

Everyone is important, everyone matters and everyone adds value. We're all in this together.
